

PHISHING EMAIL DETECTION & AWARENESS SYSTEM

PROGRAM: Future Interns__Cyber Security Intetship

TASK: Task 2

REPORT: FUTURE_CS_02

NAME: M. Bhavana

DATE: May 2026

EXECUTIVE SUMMARY

Phishing is a type of cyber attack where attackers create fake websites that look exactly like real ones—such as banks shopping site or email providers. The goal is to trick users into entering their personal details, login credentials or banking information. Once the victim enters their details, the attacker steals them and uses them for financial fraud or identity theft.

In this report, I analysed 3 verified phishing URLs collected from Phish Tank a public phishing database. Each URL was examined to identify:

- ❖ What brand it was impersonating
- ❖ What technique the attacker used
- ❖ What risk it poses to victims

METHODOLOGY

SOURCE: Phish Tank(phishtank.com)--a public database of verified phishing websites.

Steps followed for each sample:

- ❖ Checked the domain for suspicious elements.

- ❖ Identified the phishing technique used.
- ❖ Assessed the risk to victims.
- ❖ Suggested prevention methods.

TOOLS USED:

- ❖ Phish tank
- ❖ Browser
- ❖ WPS office

Sample 1

CLASSIFICATION: Phishing

RISK LEVEL: High

FINDING

- ❖ Sender address uses fake domain google.support instead of official Google domain.

- ❖ Email creates fear by saying “someone has your password”
- ❖ “change password” button may redirect to phishing website.
- ❖ Uses vague signature “The Mail Team” instead of official Google security Team

PREVENTION

- ❖ Verify sender domain carefully before responding
- ❖ Check link before clicking.
- ❖ Open Google account manually in browser instead of using email links.
- ❖ Check official company signatures and contact details.
- ❖ Enable Two-Factor Authentication(2FA)

Sample 2

CLASSIFICATION: Phishing

RISK LEVEL: High

FINDINGS:

- ❖ The email comes from pixel-giveaway@google.com which is not a legitimate Google domain for product giveaways; Google does not give away phones this way.
- ❖ “Fixel Pixel7 Pro” is a classic social engineering lure designed to trigger excitement and lower skepticism.
- ❖ Abuses Google Calendar’s legitimate invite system to appear credible and bypass spam filters.
- ❖ “Click here to join or manage your appointment” likely leads to a credential harvesting or malware site.

PREVENTION:

- ❖ Do not click any links or the “yes/Maybe” RSVP buttons.
- ❖ Report and delete the email as phishing in Gmail.
- ❖ Verify any prize claims directly via official brand website only.
- ❖ Enable Google calendar settings to block automatic event additions from unknown senders.
- ❖ If clicked accidentally, change your Google password immediately and check for unauthorized account activity.

Sample 3

CLASSIFICATION: Suspicious

RISK LEVEL: Medium

FINDINGS:

- ❖ DOMAIN MISMATCH-sent from dropboxmail.com not dropbox.com; even if Dropbox uses this, it's easily spoofed.
- ❖ NO PERSONALIZATION-only says "Hi", which no name or account email, which legitimate service emails typically include
- ❖ HIDDEN LINK DESTINATION-the "Upgrade your Dropbox" button URL is not visible
- ❖ PRESSURE TACTIC- "your Dropbox is full and is no longer syncing" creates mild urgency to push you to click
- ❖ VISUALLY CONVINCING-correct logo and branding making to detect if fake

PREVENTION :

- ❖ Do not click any buttons in the email.
- ❖ Go directly to dropbox.com in your browser to check storage status.
- ❖ If you don't actively use Dropbox, delete and ignore
- ❖ Report as phishing if anything feels off after checking your account directly.

CONCLUSION:

The email analysis identified different types of suspicious and potentially harmful emails, including phishing and spam messages. Various indicators such as suspicious sender addresses, malicious links, urgent language, and unsafe attachments were observed during the analysis. Based on the identified findings, the emails were classified according to their risk levels and appropriate preventive measures were suggested. This task helped improve understanding of email security,

phishing detection, risk assessment, and safe online communication practices in Cybersecurity.
